Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-31 and 58, drawn to a test and measurement system able to assess performance characteristics of an endoscope comprising a photometric measuring module, an image quality measurement module, a structural element measurement module and a controller, classified in class 356, subclass 243.1.
 - II. Claims 32-44, drawn to a photometric measurement system comprising an integrating sphere, a measurement probe, an image display screen, and a spectrometer. A controller is connected to the photometric measurement system for controlling the data acquisition and analyses of the photometric measurement system and that controls measurement of the image display screen, classified in class 356, subclass 236.
 - III. Claims 45-57, drawn to a photometric system to assess optical characteristics of a light source, classified in class 356, subclass 121.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions I, II, and III are unrelated because invention I is relative to a system that control at least one of the calibration, measurement, and analysis of the photometric performance characteristics of an endoscope, while

Art Unit: 2877

invention II controls the data acquisition and analyses of the photometric measurement system and that controls measurement of the image display screen and invention III controls the data acquisition and analyses of the photometric measurement system and that controls measurement and analysis of the sample light source. Thus, they have different modes of operation, different functions and different effects.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and III, and vice versa, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Joshua King on December 26, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
